

Please read before performing a test

Interpretation of Drug Test Results

Refer to diagram below.

NEGATIVE*: Two lines appear. A colored line appears in the control region (C) and a colored line appears
in the test region (T). This negative result means that the concentrations in the urine sample are below the
designated cutoff levels for a particular drug tested.

*NOTE: The shade of the colored lines(s) in the test region (T) may vary. The result should be considered negative whenever there is even a faint line.

- POSITIVE: A colored line appears in the control region (C) and no line appears in the test region (T). The
 positive result means that the drug concentration in the urine sample is greater than the designated cutoff
 for a specific drug.
- INVALID: No line appears in the control region (C).

- Wait a minimum of FIVE (5) minutes before attempting to read results.
- Line intensity will vary with each drug being tested
- Any indication of a line, regardless of intensity, should be considered a negative test.
